

# Technology solutions

The buildable technology experts

ISG's technology solutions team is revolutionising the traditional technology delivery model, making our clients' work environments smarter and more resilient.

Our game-changing approach starts not with what we do, but with what we believe...

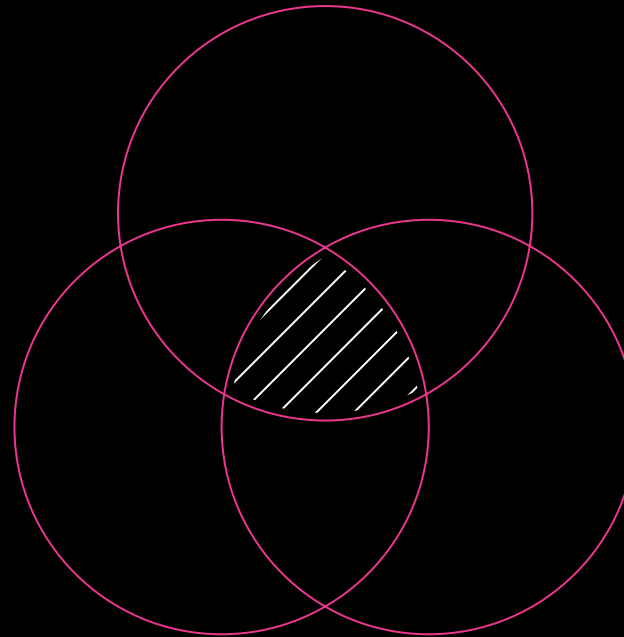

## We believe...

# All business environments are technology environments

---

Technology can no longer afford to be an add-on to the built environment. It must be integral to the fabric of the place. At ISG, our technology solutions team works at the intersection of technology, construction and business, creating buildable technology solutions from strategy and design through to delivery.

---

### What this means for you:

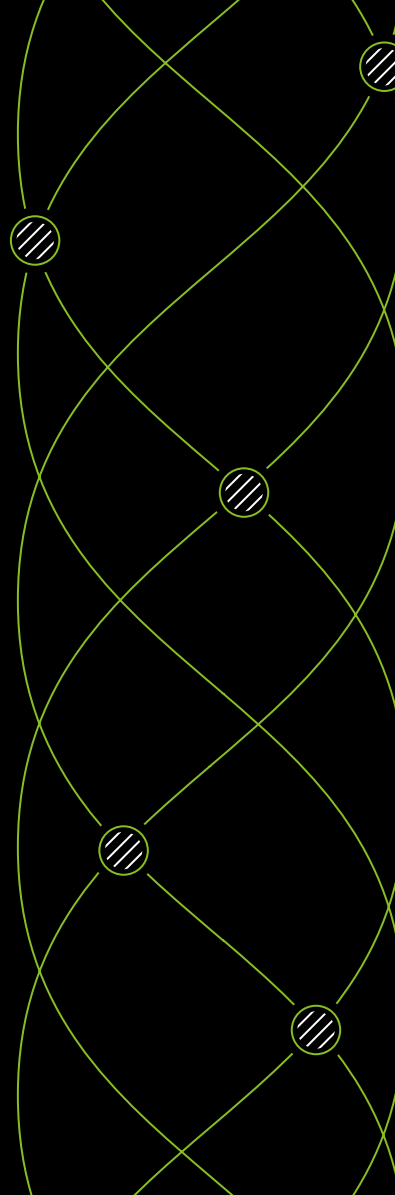

- Alignment with your business goals
  - Leading-edge specialist knowledge
  - IT value engineering and maximised IT ROI
  - Delivery assurance
  - Better handover and soft landing
  - Future-proofing your business with the latest technology
-

## We believe...

# All delivery teams are technology teams

---

Disconnected technology and construction teams plague our industry, often resulting in inefficient delivery and ineffective solutions. At ISG, our technology solutions team is on a mission to challenge the status quo. We provide highly collaborative construction management unprecedented in the industry.

---

### What this means for you:

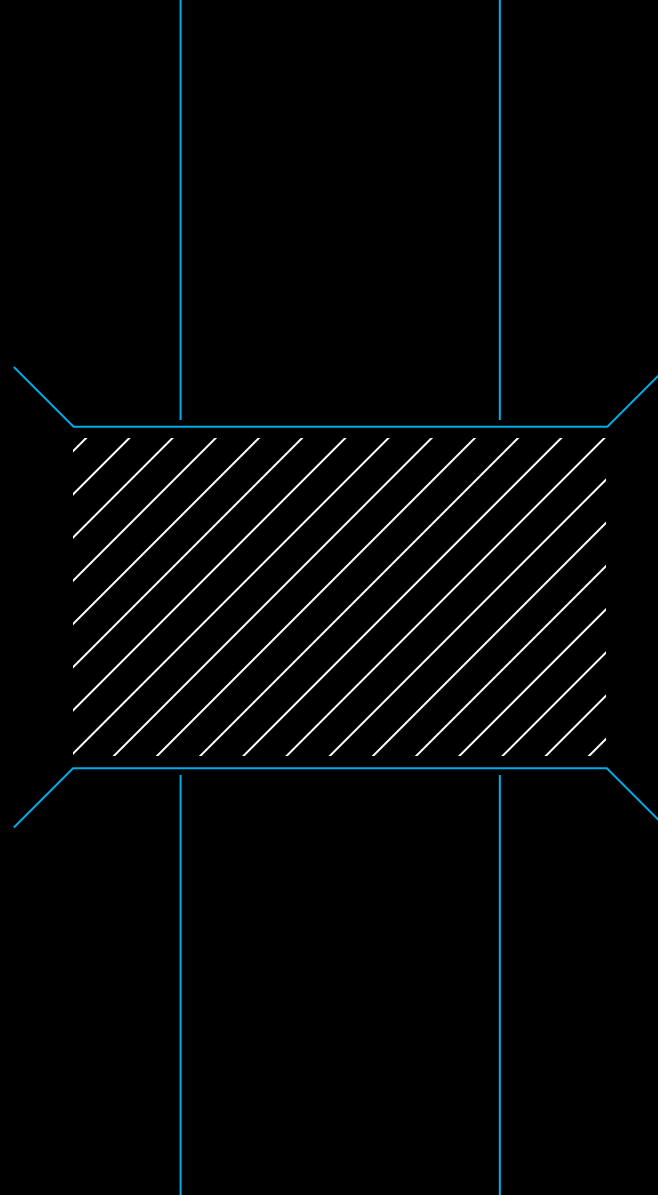

- Cost savings derived from efficiencies
  - Best-in-class people
  - Trusted ICT advisors
  - Better working relationships
  - Clarity and openness
-

## We believe...

# All end users are technology users

---

Many technology experts say they focus on the end user, but we are the first solutions provider to operate in a way that directly supports this claim. We bridge the gap between IT and facilities management with life cycle and end-user secure services that provide critical specialist technology support.

---

### What this means for you:

- Proactive support
  - Technology resilience and consistency
  - Effective integration between FM and IT
  - Deeper relationships
-

# What we do

## Solve

- Vision strategy
- Feasibility
- Design management
- Procurement strategy
- Independent advisor

## Build

- Preconstruction
- Procurement
- Implementation
- Cost management
- Handover and acceptance

## Secure

- Budget development
- Scope creation
- Change management
- Critical environments
- Programme management

“The construction and IT industries have long operated in silos. Our vision is to challenge the way we work together in a dynamic world, enabling our clients to benefit from integrated thinking and solutions. We add value by providing more with less.”

**Matthew Roche**  
Managing Director, Technology Solutions

# Contact

Our people are best-in-class technology experts united around a common desire to help our clients work smarter and faster.
